stoppageyukar1.netlify.app | the-crease.netlify.app | f1yukar1.netlify.app | github.com/namanagr26 | namanagr26.github.io/Portfolio

CSE (AI/ML) graduate and Cybersecurity Intern who ships complete systems end to end, from ML models and data pipelines to live public dashboards and security tooling. Built a packet-capture intrusion detection tool, completed web application VAPT and network reconnaissance assessments, and deployed three live dashboards solo. Works across Python, SQL, JavaScript and Java/Spring Boot; certified in cybersecurity (Google), deep learning, Azure AI, and BI (Tableau, Power BI).

EDUCATION

Bachelor of Technology — Computer Science & Engineering (AI/ML) *Graduated July 2026*
Sikkim Manipal Institute of Technology, Majitar, Sikkim | Reg. No. 202200070

Class XII — High School Diploma *March 2022*
Tinsukia English Academy, Tinsukia, Assam

EXPERIENCE

Cybersecurity Intern — SkillOrbit *Aug 2026 – Present*
Kali Linux · Burp Suite · Nmap · Shodan · WhatWeb · Python · Scapy · Streamlit

- **Network Traffic Analyzer (capstone):** Built an end-to-end packet capture and intrusion detection tool with Scapy and SQLite (~138K packets / 460 MB in lab testing), detecting 4 threat types (traffic spikes, port scans, SSH/RDP brute-force attempts, unknown-IP connections) with a learned IP baseline and alert de-duplication. GitHub
- Used robust statistics (median + MAD) for spike detection so attack traffic cannot inflate its own threshold; validated every rule in a controlled lab with nmap scans, ping floods and SSH connection floods, and shipped a live Streamlit dashboard with one-click HTML/CSV security reports.
- **Web Application VAPT:** Exploited and verified 8 OWASP Top 10 / OWASP API Top 10 vulnerability classes (SQL injection, XSS, CSRF, CORS misconfiguration, IDOR/BOLA, BOPLA/mass assignment, race condition, SSRF) in PortSwigger Web Security Academy labs using Burp Suite, and wrote a 34-page VAPT report covering payloads, reproduction steps, impact, severity and remediation.
- **External Reconnaissance & Enumeration:** Ran an authorized, non-destructive assessment of scanme.nmap.org using Shodan, Nmap (service/version and OS detection, NSE scripts), WhatWeb and curl; converted scan output into a prioritized attack-surface table and investigated an unidentified tcpwrapped service on port 31337.

SKILLS

Languages: Python, SQL, JavaScript, Java, C, C++

AI / Machine Learning: TensorFlow, Keras, scikit-learn, deep learning (CNNs, RNNs, LSTMs, Transformers), gradient boosting, MobileNetV2, LLM integration (Phi-3, GPT-family), Gradio

Cybersecurity: Web application VAPT (OWASP Top 10, OWASP API Top 10), Burp Suite, Nmap, Shodan, Kali Linux, packet analysis (Scapy), intrusion detection, SIEM tools, network reconnaissance, security reporting

Data & BI: Pandas, NumPy, SQL / MySQL / SQLite, Tableau, Power BI, Streamlit, Plotly, dashboarding, KPI reporting, feature engineering

Backend & Web: Spring Boot, RESTful APIs, HTML, CSS, JavaScript, Netlify continuous deployment, API integration (ESPN, Jolpica, FastF1)

Cloud: Microsoft Azure AI Foundry; AWS Bedrock and Google Vertex AI (certified coursework)

Tools & Practices: Git, Playwright, Agile SDLC, VS Code

Spoken Languages: English, Hindi, Assamese

SHIPPED PROJECTS

STOPPAGE — FIFA World Cup 2026 Dashboard stoppageyukar1.netlify.app

JavaScript · ESPN API · Netlify

- Delivered live coverage of all 104 World Cup 2026 matches (scores, group tables and knockout bracket) to the public with zero manual updates, by integrating the ESPN API into a continuously deployed Netlify pipeline that served real user traffic throughout the tournament.

F1 Performance Analytics Suite race predictor · driver coach

Python · scikit-learn · FastF1 · Streamlit · Plotly

- Built a race-outcome prediction pipeline (HistGradientBoosting) on multiple seasons of real F1 data, with leak-free rolling driver/team/circuit form features and a chronologically held-out test season, evaluated by MAE and per-race Spearman rank correlation.
- Built a telemetry-based driver coach that aligns two laps on a shared distance grid, detects per-corner braking and throttle points, and converts time deltas into plain-English coaching (e.g. “braking 15 m late at T3, losing 0.12 s”).

The Crease & F1 Dashboards the-crease.netlify.app · f1yukar1.netlify.app

JavaScript · Playwright · Jolpica API · Netlify

- Independently built and shipped two live production dashboards: an IPL 2026 platform (live countdown, squad cards, pitch intelligence via Playwright) and an F1 standings/results tracker (Jolpica API), taking each from data pipeline to public deployment solo.

ACADEMIC PROJECTS

Automated Audio Captioning System *Mini Project*

Python · CNN ResNet18 · BERT · Log-Mel Spectrogram · Clotho v2 · Transformer

- Outperformed rule-based and template-based baselines on audio captioning (BLEU-4: 0.35, METEOR: 0.40, ROUGE-L F1: 0.38 across 1,045 test samples) by building a ResNet18 + frozen-BERT transformer encoder-decoder, trained on 6,972 clips (34,860 captions) over 250 epochs with beam search decoding.

Plant Disease Diagnosis & Reporting System *Major Project*

Python · MobileNetV2 · Phi-3-mini LLM · Gradio · PlantVillage Dataset

- Delivered farmer-ready treatment guidance directly from a plant photo by pairing a fine-tuned MobileNetV2 classifier (38 disease categories, PlantVillage dataset) with a Phi-3-mini LLM that auto-generates structured remediation reports, deployed end-to-end via a Gradio web interface.

Heart Disease Prediction System

Python · Deep Learning · UCI Hospital Dataset · Gradio

- Built a neural classifier on the UCI Hospital Dataset to flag cardiovascular disease risk, with feature scaling and data cleaning, deployed via Gradio.

Employee Management System — Backend

Java · Spring Boot · MySQL · REST

- Designed a RESTful API layer and relational database schema in Spring Boot to manage employee records, authentication and departmental data, following object-oriented design and standard SDLC practices.

CERTIFICATIONS

View all certificates: drive.google.com/drive/folders/1hZy7EBAoqvCEONZk2vsjuUa9TGSYqz_b

- **Google Cybersecurity Professional Certificate** — Google / Coursera (SIEM, IDS, network security, Linux, Python automation) — Aug 2026
- **Deep Learning Specialization** — DeepLearning.AI / Coursera — Aug 2026
- **Anthropic Claude Developer Certifications** — MCP, agent skills, Claude API, Claude Code, AWS Bedrock / Google Cloud deployment — Aug 2026
- **Microsoft Azure AI Essentials** and **Build AI Agents with GitHub Copilot** — Microsoft / LinkedIn Learning — Aug 2026
- **Tableau Essential Training 2026** and **Learning Power BI Desktop** — LinkedIn Learning — Aug 2026
- Also: ML A-Z, TensorFlow Bootcamp, DSA in C/C++ (Udemy); Graph Theory, HCI, Responsible & Safe AI (NPTEL)
